FREE GUIDE · YOUR MONEY, YOUR FUTURE

The 5-minute money check.

Five questions, a pen and your last month's numbers. No finance degree needed. You'll see where your money stands before you invest a single pound.

1 Where does your money go?

Write your monthly income and what you spent last month. Take spending away from income: that's what you **keep**. Divide it by income to get your **savings rate**.

I keep each month _____

Savings rate _____

2 How long would your savings last?

Divide the cash you can reach quickly by your monthly spending. That's how many **months** you could cover if income stopped. Many planners use 3 to 6 months as a common reference point.

Months covered _____

3 How much goes to debt?

Add up all monthly installments and loan payments. Divide by income. For every installment plan, ask for the **real yearly rate**, not the "flat" rate. Upfront fees count too.

Debt payments ÷ income _____

4 Is your cash losing to prices?

How much of what you own sits as cash in pounds, earning nothing? Prices rose about **13.9%** in the year to September 2026 (CAPMAS), so cash that earns nothing buys less each year.

Cash earning nothing _____

% of what I own _____

5 Is the app licensed?

Before you deposit anywhere: find the company's **full legal name**, search it at **fra.gov.eg**, check the licence covers what you're buying. Vague answers? Walk away.

Legal name checked ☐

Found at the FRA ☐
